

Requested edit budgets and achieved cohort geometry

XCAT 260602, frame 1 | 15 edited variants + original baseline | 16 distinct masks

Native grid: $1 \times 1 \times 1$ mm; 1 voxel = 1 mm^3 . Original selected target: 52,576 voxels ($52,576 \text{ mm}^3$).

Fixed inner-arch step: 7 mm requested; 59 voxels removed and 695 unresolved in every edited variant.

Unresolved releases keep their original labels. Tissue resistance and recipient search constrain achieved changes.

Distances are requested voxel-grid budgets, not measured wall displacement, lumen area, or clinical severity.

Target: ROI-selected tissue and surviving descendants; nearby selected branches may be included. One source anatomy.
